Education

I.K. Gujral Punjab Technical University — Punjab, India
Bachelor of Technology in Computer Science and Engineering — *Expected June 2027*

- **CGPA:** 8.50/10 (till 6th semester) | **Coursework:** DSA, DBMS, Operating Systems, Computer Networks, Machine Learning

Experience

Open Source Contributor — 2026
breakscale (1.1k stars), libredb-studio, zero-cost-crm, invisible-notes — *Remote*

- Got **6 pull requests merged** across 4 projects by working through code review with each maintainer.
- Fixed a load-balancer bug in **breakscale** that let requests skip capacity and queue limits, and proved the fix with **before/after throughput benchmarks**.
- Built a settings editor in **zero-cost-crm** and fixed an audit-log gap in **libredb-studio**, a database tool.

Future Finders — June 2025 – July 2025
Industrial Trainee, Full-Stack Development — *Punjab, India*

- Built and deployed a portfolio app with a **JWT-secured REST API** on Express and MongoDB during a 45-day training program.

Projects

CampusForms | *Next.js, TypeScript, Supabase, PostgreSQL* — Live | GitHub

- Built a live forms platform for universities with **9 question types** and **14 templates**, protected by PostgreSQL **Row-Level Security**.
- Made responses truly anonymous: a **database trigger** deletes identity data the moment a response is saved.
- Moved deadline, rate-limit and data checks into the database, closing a loophole that let users skip them.

ParkIt | *React, TypeScript, Node.js, Express, Socket.io, MySQL, Razorpay* — Live | GitHub

- Built a real-time parking platform end to end, with **3 role-based portals** and **22 REST endpoints**.
- Updated parking-slot availability for every user in **under a second** using Socket.io, with no polling.
- Added **Razorpay payments**, verified with HMAC SHA-256 signatures and server-side amount checks.

Cuprim | *Swift, SwiftUI, AppKit* — GitHub

- Built and shipped a **macOS menu-bar app** that tracks usage limits across 4 AI coding tools, running fully on the device with no backend.
- Handled the whole release alone: **signed .dmg builds**, **auto-updates** and an MIT open-source release.

LabExam AI | *Python, LLMs, Machine Learning* — In progress

- Building a lab-exam platform that runs student code in a **sandbox** against hidden tests, and uses **LLMs** to give each student a unique problem.
- Adding an AI viva that asks students about their own code, plus plagiarism checks that flag cases for the teacher.

Technical Skills

Languages: C++, Python, JavaScript, TypeScript, Swift, SQL
Frontend: React, Next.js, Tailwind CSS, HTML, CSS, SwiftUI
Backend: Node.js, Express, REST APIs, Socket.io, JWT Authentication
Databases: PostgreSQL, MySQL, MongoDB, Supabase
Tools: Git, GitHub Actions, Docker, Linux, Postman, Claude Code, LLM APIs, MCP

Achievements

Hackathon: Led a team of 4 at Hack-N-Win 3.0 and owned the architecture and backend of an AI farming platform.
Problem Solving: Solved 100+ Data Structures and Algorithms problems on takeUforward.
Writing: Write articles on Hashnode about backend development and authentication.
